About Deloitte	166
About CII	167

Foreword

Mr Sunil Kant Munjal
Chairman, CII Education Council

The eighth edition of the ASHE report is with us and I am happy that we have been able to put together our thoughts around a subject which is dynamic as well as fundamental for the growth and prosperity of our nation.

The USP of this publication remains the individual snapshots of states and Union territories that it presents and in this it remains truly unparalleled. The Ministry of HRD now brings out the findings of its All India Survey of Higher Education (AISHE) every year but even there the break-up is not available in a nuanced manner for every state separately.

The big-ticket item in education this year remained the Draft National Education Policy and the conversation around it. The final policy document may or may not be as comprehensive as the draft but it is likely to incorporate some of the critiques which were voiced by key stakeholders during the course of discussions. CII too organized a round-table on this subject where the salient features of the policy were discussed and debated.

I am happy that ASHE 2019 takes a look at the draft education policy and provides a commentary on its important features. This report continues to be an important document for policy makers at the Central as well as at the state level and I thank the Deloitte team for their collaboration and support for seventh consecutive year for this report.

Foreword

Anindya Mallick

Partner, Deloitte Touche Tohmatsu India LLP

With the advent of the fourth industrial revolution we are in the midst of continuous disruptions brought on by adoption of digital technologies such as analytics, artificial intelligence, cognitive technologies, and the IoT. This revolution is characterised by its ability to transform economies, jobs, and even society itself through the introduction of new technologies and processes.

The global forces of change are disrupting the ways in which we learn and work. According to the WEF *Future of Jobs* Report, it is envisaged that 65 percent of children entering primary school today will ultimately end up working in completely new job types that don't yet exist. In such a rapidly evolving employment landscape, the ability to anticipate and prepare for future skills and expertise requirements is critical for the education system.

The education system will need to transform in terms of course curriculum design, pedagogy to meet the challenges of the future of workplace as well as the aspirations of youth entering the education system. Education will need to focus on creativity and lifelong learning for those being prepared for a career where the key constant will be continuous disruptions.

The digital-age education system calls for personalised and dynamic methods of learning, a better equipped faculty, new parameters to gauge student and faculty performance, and innovative models of funding. The NEP 2019 seeks to address the concerns and constraints of the current education system and provide a path for transforming the education system to face the future talent requirements and leverage the demographic benefits that we have for building the workforce of the future.

We would like to express our sincere gratitude to CII for their cooperation in preparing this report.

List of Abbreviations

BLA	Bachelor of Liberal Arts
BLE	Bachelor of Liberal Education
CII	Confederation of Indian Industry
GER	Gross Enrolment Ratio

UGC	University Grants Commission
URGs	Under Represented Groups
WEF	World Economic Forum

Part I - Focus on key themes and developments

Introduction

India has the third largest HE system in the world, with 32.6 million students (52 percent male and 48 percent female) enrolled across 903 universities, 38,061 colleges and 10,011 stand-alone institutions in 2017-18¹. The country's GER in HE has registered a marginal increase from 25.2 percent in 2016-17 to 25.8 percent in 2017-18, with a target of reaching 30 percent by 2020².

To achieve this target, a move towards an outcome-based approach to education sector may be considered as one of the key initiatives to be taken by the government. The education budget allocation increased by 11 percent from 2018-19 to 2019-20 (from INR 85,010 crore to INR 94,854 crore³). In HE the key transformational focus, in Budget 2019 has been on research and innovation, which is a critical component for global ranking. An allocation of INR 400 crores (last year allocation was INR 129 crores) has been made to support transforming select Indian HE institutions into world-class institutions. This supports the intent of attracting global new-age manufacturing industries to India through fiscal incentives announced in the areas of semi-conductor fabrication, solar photo voltaic cells, lithium storage batteries, solar electric charging infrastructure, computing hardware, etc., as well as making India the global hub for electric vehicle manufacturing. The budget has given due importance to research and innovation through the proposed establishment of NRF to fund, coordinate, and promote research. Research funds available with various ministries are proposed to be assimilated into the fund with an aim to strengthen the research ecosystem and ensure that research thrust areas are aligned to national priorities.

While focusing on initiatives to improve enrollment in HE, the government has also taken measures to encourage good institutes to perform better at a national and global scale by offering autonomy in many areas. In September 2017, the UGC set in motion the IoE⁴ initiative to strengthen the HEIs. The focus was to identify 10 public and 10 private universities that would be given significant autonomy in operations, from setting their curriculum and recruiting foreign faculty to entering into academic tie-ups. The objective for these selected institutes is to acquire global standing and credibility within the first 10 years of being declared as the IoE. In August 2019 with the announcement of another 14 institutes, all 20 IoE have since been announced.⁵

The recently introduced National Education Policy, 2019 aims to bring the HE sector in India on par with the international standards and contemporary practices. It has clearly articulated the intentions in striving forward with a retrospective analysis of the

⁵ <https://pib.gov.in/newsite/PrintRelease.aspx?relid=192458>

traditions of India. The policy also endeavours inclusivity, and accessibility for all the socio-economic classes of the society with the motto of "Development for All".

Along with the above initiatives, the government has also drafted a plan to introduce structured private participation in building the HE sector in India. This is likely to facilitate global collaborations, enhance quality of education, and assist in creating better job opportunities for graduates. The Indian HE system is undergoing a shift towards outcome-based approach where the government is making efforts to internationalise the system as well as make Indian institutes globally competitive.

1. The Fourth Industrial Revolution and the future of Indian education

There are many definitions for Industry 4.0, but essentially, it is the marriage of physical and digital technologies such as analytics, artificial intelligence, cognitive technologies, and the IoT. This marriage allows for the creation of a digital enterprise that is not only interconnected, but also capable of more holistic, informed decision making. Industry 4.0 provides abundant opportunities for new products and services, better ways to serve customers, new types of jobs, and wholly new business models.

The previous industrial revolutions evolved over time; however, the current revolution is advancing at extraordinary speed, driven by disruptive technologies developing at an exponential rate. Amid shifting demographics and unprecedented global connectivity—not just technological, but also social and economic—Industry 4.0 can herald greater opportunities than any that came before it.

The fourth industrial revolution is expected to redefine the future of work⁶ in terms of requirements of the workforce in terms of defining “work”, who will be the workforce and how will be the workplace.

- **Work** will largely be defined by what work can be automated - with increasing robotics, cognitive and AI technologies, what work can be “done by” and “done with” smart machines
- **Workforce** will need to consider who can do the work - with new talent platforms and contracts, who can do the work? How to leverage the continuum of talent from amongst full time, managed services, freelancers, gig workers, and even crowd sourcing
- **Workplace** of the future needs to consider where is work to be done in terms of workplaces and work practices getting reshaped on account of new combinations of collaborations, teaming, leveraging digital reality technologies

The global forces of change, as discussed above, in terms of the rise of artificial intelligence, the fourth industrial revolution, the future of work—are disrupting the ways in which we learn and work. For instance, there is growing debate about the impact of AI and automation on jobs, shelf life of skills in today’s technology-driven sectors, and changing learning models in the digital era. Other factors, such as the growing cost of education, funding constraints, and the rise of non-traditional ways of learning, are seen altering the education landscape globally. Add to this the growing challenge of skills gap across sectors, which has made it imperative to align learning with the industry demands. According to the WEF’s *Future of Jobs report*⁷ it is envisaged that 65 percent of children entering primary school today will ultimately end up working in completely new job types that don’t yet exist. In such a rapidly evolving employment landscape, the ability to anticipate and prepare for future skills and expertise requirements is critical for the education system.

According to the WEF report, given the upcoming pace and scale of disruption brought about by the Fourth Industrial Revolution, current technological trends are bringing about an unprecedented rate of change in the core curriculum content of many academic fields, with nearly 50 percent of subject knowledge acquired during the first year of a four-year technical degree becoming outdated by the time students graduate, according to one popular estimate. A focus on the state of the talent pipeline for traditional formal qualifications and hard skills therefore risks dramatically understating the scale of impending skill set disruption if a large part of the existing subject knowledge of the current workforce will be outdated in just a few years.

Consequently, the education system too will need to transform in terms of course curriculum design, pedagogy to meet the challenges of the future of workplace as well as the aspirations of youth entering the education system. Education will need to focus on creativity and life-long learning for those being prepared for a career where the key constant will be continuous disruptions.

The Indian HE sector too is at a critical juncture, as it needs to prepare well for such disruptions. While Indian HE has grown tremendously in terms of enrolment, some areas, such as quality of education and research, faculty retention, funding alternatives, and employability of students still need attention. Challenges include gaps between the skills being taught and the skills needed at the workplace, skill gaps among faculty, funding channels for modernisation of infrastructure and facilities, and the amount and quality of research being carried out in these institutions.

Some of the key challenges that the HE system needs to overcome through targeted interventions are as follows:

- **The growing divergence between curricula and market demands:** In the post-industrial era, the skillsets one obtained in college or university served one for a lifetime, for example, an engineer trained in college could hope to leverage his skillset throughout his career in a manufacturing facility. But as stated earlier, currently the shelf life of skills is declining as disruptive technologies necessitate changes in business and operating models leading to changes in workforce requirements. Educational institutions will need to keep up with these changes with regular refreshing of course curriculum, which will require close consultation with industry. As part of the course, students will need to be imbued with skills relating to creative thinking, problem solving, and lifelong learning. Industry Academia coordination is of utmost importance in today's world given that according to the *India Skills* report in 2019, only 47 percent of the available talent is employable.
- **Quantity and quality of research:** Research conducted at HEIs is a key parameter in the global ranking framework. Research orientation of institutions is expected to be a key enabler for institutions to be successful in the new era of constant changes and disruptions. Ability to conduct research on contemporary topics will enable institutions to attract faculty, students as well as forge relations with industry. A key parameter to measure the quality of faculty needs to be their contribution towards improving the existing body of research. It should be ensured for faculty that there is a proper balance between teaching and research.
- **Faculty vacancies and expertise:** Vacancies in faculty posts is observed across almost all institutions. To ensure that institutions can move towards offering multi-disciplinary course offerings, it should be ensured that vacancies are filled in with experienced faculty members having requisite skill sets. Even for filled positions, in many cases it is observed that the faculty's skill-sets are not in tandem with the needs of the institutions. As per *Deloitte Deans Survey 2019⁸*, nearly 80 percent of deans stated that lack of quality faculty is the biggest challenge for the Indian HE

sector. More than 90 percent believed that the faculty needs to upskill more than once a year to match industry expectations.

- **Strike a balance between learning and job-readiness:** In our current education system, students are more concerned with getting a job on the very first day of the placement season than looking at whether the job offered will lead to a sustainable career ahead. This is a contentious issue in today's educational system. Students, who put in three or four years of learning are, after all, justified in expecting to be employed at the end of it. On the other hand, a sole focus on employment could diminish the focus on learning. With the advent of the fourth industrial revolution, today's students cannot afford to be complacent. The need of the hour is lifelong learning and both the students as well as the institutions need to gear up towards having pedagogy that focuses on conceptual understanding, imbibe a culture of knowledge seeking that can lead students towards the path of continuous skill upgradation and lifelong learning.
- **Promote inter-disciplinary learning:** Given the requirements of the current world, today's learner cannot be content with a constricted education model and will need to mix and match disciplines. The onus of executing this is mostly on the universities (and on the regulator). Many universities are already seen to be moving in this direction.
- **Expand online education:** Virtual modes of learning are popular across the world. India's e-learning market is likely to expand over 9.5 million users by 2021⁹. Building a credit-system for such learning will be important to encourage students to leverage these courses as part of their overall education. This measure also is also likely to address issues relating to accessibility as well as improve GER. The MHRD's SWAYAM¹⁰, offers free online courses, which allow students to continue "life-long learning" and help reskill and upskill themselves. Institutions can explore the "subscription university" model where the institution becomes a platform for continual learning for both technical and soft skills—throughout a student's lifetime. Students walk in and out of the system to gain and update their knowledge and skills by paying an annual subscription fee¹¹. This will not only benefit students in terms of keeping connected with their alma mater but also be a revenue generation opportunity for institutions.

The Indian HE sector is at crossroads. Students want skills that can help them thrive in the market. Employers, on the other hand, want talent that can match and evolve based on market demands. Educational institutions have always been that bridge between the two sides, but the traditional educational model is not likely to deliver tomorrow's talent.

The digital-age education system calls for personalised and dynamic methods of learning, a better equipped faculty, new parameters to gauge student and faculty performance, and innovative models of funding. A broader and a more collaborative coalition between educational institutes, employers, students, professionals, regulators, and government entities, can therefore, help plug the existing gaps and is likely to augur well for the future of the Indian HE sector.

2. National Education Policy 2019 – A leap towards holistic and liberal Higher Education System

Introduction

In October 2019, The MHRD, Government of India, published the NEP 2019, with some major transformative measures to the current education system with primarily focusing on development of the creative potential of the youth and imbibe the culture of lifelong learning to make valuable contributions to the economic growth of India as well as pursue opportunities across the world. The policy aims at making the Indian education system at par with the contemporary international standards keeping in mind the accessibility for all social, economic, and geographic backgrounds.

While drafting the NEP 2019, the current functioning of the education system across the country was assessed and key challenges and constraints impending the implementation of agendas of the previous policies were identified. In preparing the NEP 2019, special attention is stated to have been given in attending to the unfinished agendas from the previous policies. Some of the key highlights of NEP 2019 are discussed in the following sections.

Institutional restructuring and consolidation

The initiative to move the HE system to large multidisciplinary universities, colleges, and HEI cluster is a key highlight of the NEP 2019. With more than 800 universities and 40,000 colleges, the HE system in India is extremely fragmented with poor rates of intakes in many of them.

The aim is to bring down the number of colleges and universities and raise the quality of HEIs with more options for students. This is expected to result in increased student enrolments and help in optimal use of infrastructure and resources and attain the multidisciplinary ecosystem of teaching, research, and service. The goal is to achieve a GER of 50 percent over the next 10 years to be comparable with other rapidly developing nations (such as, e.g., China and Brazil, which have GERs in HE of 44 percent and 50 percent, respectively).

The diversification of course offerings in classrooms is intended to be complemented with option to run ODL programmes, to enhance the delivery of the course offerings, improve access, increase GER, and provide increased opportunities for lifelong learning. Further the policy states measures to streamline the admission processes to the HEIs through the assessments of the National Testing Agency, rather than entrance exams conducted separately by individual HEIs.

Towards more liberal and flexible education

In line with the introduction of multidisciplinary courses in HEIs, a more flexible and liberal learning experience is proposed. Taking lessons from traditional ancient universities such as Takshashila and Nalanda to combine subjects across fields, the idea of “liberal arts” is one of the key highlights of NEP.

Integrating the humanities and arts with STEM (science, technology, engineering, mathematics) have consistently showed positive learning outcomes, including increased creativity and innovation, critical thinking and higher-order thinking capacities, problem-solving abilities, teamwork, communication skills, deeper learning and mastery of curricula across fields, and increases in social and moral awareness.

With better institutional autonomy and enhanced faculty strength and diversity, students will be given flexibility in curriculum and course options in addition to rigorous specialisation in a subject or subjects. A four-year programme called BLA or BLE with multiple exit options is stated to be made available to the students.

Support for students

The policy puts forward measures in supporting students to build an effective ecosystem to facilitate an experience that is joyful yet rigorous, a responsive curriculum aimed at achieving the students’ goal, engaging and effective pedagogy, and caring support to optimise their learning experience and overall development.

Institutions and faculty will have the autonomy to innovate on matters of curriculum, pedagogy, and assessment - informed by a broad overall framework of higher educational qualifications that ensures consistency across institutions and equivalence across programmes, both in the ODL and the traditional “in-class” learning.

Students from socio-economically disadvantaged backgrounds will be given opportunities and access to the high quality HEIs along with continuous support throughout the course period. Adequate funds will be made available for this.

Motivated, energised, and capable faculty

The most important factor in the success of any education system is the quality and engagement of the faculty. As learnt from the assessment of the current state of HE, motivated faculty having the required experience and expertise is the single most critical factor for ensuring an efficient and productive HE ecosystem. NEP 2019 states measures to be adopted for improving faculty effectiveness and responsiveness through increased and diversified faculty, reduced student-teacher ratios, flexibility, and autonomy in curriculum design and pedagogical approaches that are likely to also help keep the faculty motivated and invested.

The presence of outstanding and enthusiastic institutional leaders that cultivate excellence and innovation through a merit- and performance-based process and culture is the need of the hour. Merit-based recruitment within the existing reservation categories and career management along with competitive compensations are proposed to be followed to ensure quality faculty for the students. A robust and merit-based tenure track, promotion, and salary structure is proposed with multiple salary levels within each faculty rank, to incentivise and recognise excellent and committed faculty and do away with the seniority bottlenecks in career progressions.

Equity and inclusion in higher education

While striving towards uplifting the standards of education, it is important to make it accessible and available to all the socio-economic class of the society. Some of the key policy initiatives discussed for equity and inclusion in HE are as follows:

- Setting clear targets for higher GER for under-represented groups (URGs)
- Enhancing access by building more high-quality HEIs in special education zones containing larger numbers of URGs
- Requiring institutional development plans that contain specific plans for action on increasing participation from URGs, including: mitigating opportunity costs and fees for pursuing HE, providing more financial assistance and scholarships, conducting outreach on HE opportunities and scholarships
- Increasing economic and employability potential of HE programmes
- Developing more degree courses in Indian languages and bilingually
- Ensuring all buildings and facilities are wheelchair-accessible
- Developing bridge courses for those students that may come from disadvantaged educational backgrounds
- Providing socio-emotional and academic support for all such students through suitable counselling and mentoring programmes

National Research Foundation

Research is an imperative area in not just the field of education but in other fields as well. India has traditionally aimed in building the research ecosystem and always stood for it. Research orientation is also a key criteria for obtaining global ranking. The NEP envisages to establish the NRF to catalyse quality research in the nation.

The primary activities of the NRF will be as follows:

1. Fund competitive peer-reviewed grant proposals of all types and across all disciplines
2. Seed, grow, and facilitate research at academic institutions, particularly at universities and colleges where research is currently in a nascent stage, through mentoring of such institutions, hiring excellent young research students and faculty, and strengthening and recognising existing high-quality programmes at such institutions
3. Act as a liaison between researchers and relevant branches of government as well as industry, so that research scholars are constantly made aware of the most urgent national research issues of the day, and so that policymakers are constantly made aware of the latest research breakthroughs
4. Recognise outstanding research and progress achieved via NRF funding/mentoring across subjects, through prizes and special seminars recognising the work of the researchers.

Transforming the regulatory system of higher education

The regulatory regime in the HE system is stated to be complex and difficult to navigate from the institute administrator's perspective and is stated to be able to achieve the desired outcomes. The regulatory requirements in setting up HEIs are significant and intertwined with many other norms.

NEP 2019 puts forward a solution in having one common regulatory regime for the entire HE sector across the country to eliminate the duplication and bottlenecks in the federal ranks. This common regulatory system is suggested to be facilitated through accreditation of institutions by appropriate non-profit accrediting institutions who in turn will be licensed by a "meta-accrediting" body.

The aim is to empower the HEIs with full autonomy in the academic, administrative, and eventually financial operations while ensuring that the truly essential matters are given due attention.

Conclusion

The National Education Policy, 2019 clearly aims to bring the HE sector in India on par with the international standards and contemporary practices. It has clearly articulated the intentions in striving forward with a retrospective analysis of the traditions of India. The policy also endeavours inclusivity, and accessibility for all the socio-economic classes of the society with the motto of "development for all". It details out specific initiatives in the key areas requiring attention and inspection. The policy sheds optimism for a better India with educated and productive citizens geared for nation building.

Part II – India and state profiles in higher education

India: Key statistics and trends in higher education

Key indicators

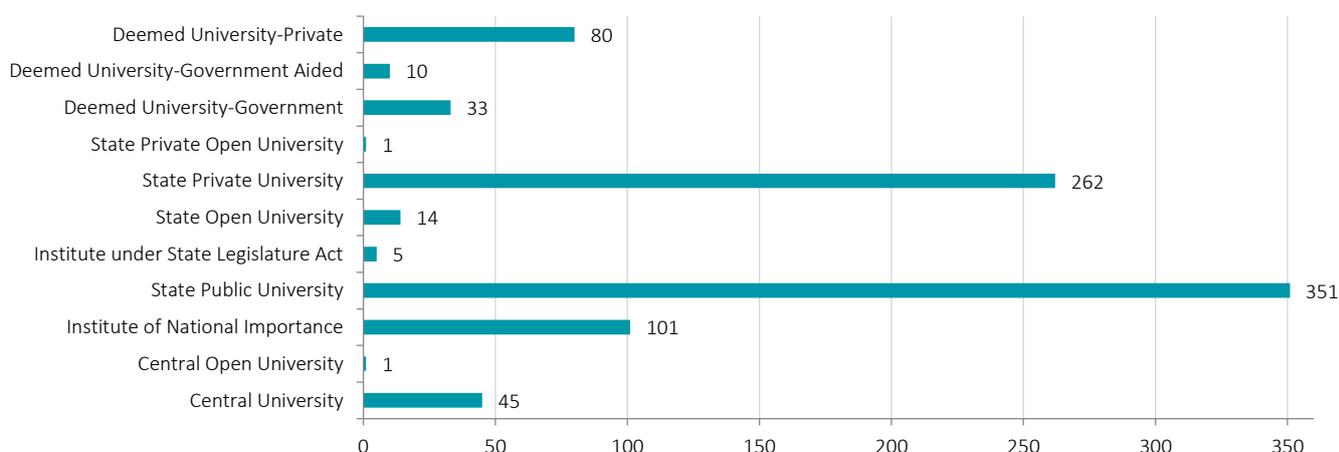

Indicator	Total	Male	Female
Total population (crore)	121.1	62.3	58.7
Literacy rate	74.0%	82.1%	65.5%
Population in 18-23 age group (crore) Share to total population (%)	14.03 (11.6%)	7.33 (10.8%)	6.69 (11.4%)
GER ²	25.8	26.3	25.4

Source: 1. Census 2011; 2. All India Survey of Higher Education, MHRD 2017-18;

Education infrastructure

Universities by Type: The break-up of number of universities in the country based on university type is shown below. There are 903 universities across the country, with state public universities constituting the highest share (38.9 percent). The top five states with the highest number of universities include Rajasthan (79, 8.75 percent of total in India), followed by Uttar Pradesh (76, 8.42 percent), Gujarat (65, 7.20 percent), Karnataka (60, 6.64 percent), and Tamil Nadu (58, 6.42 percent).

University by type

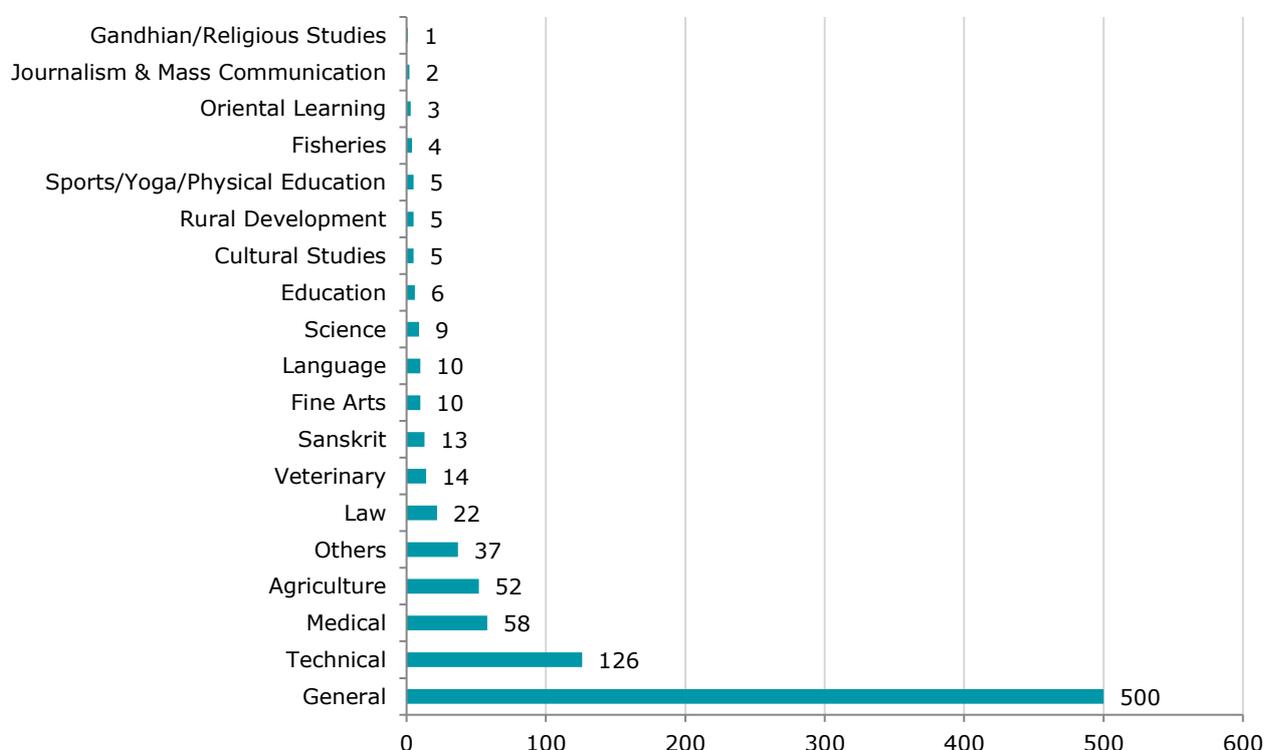

The break-up of the universities by type indicates variance between the top five states as follows:

Gujarat is ranked first in India in terms of total number of state public universities (27, 7.7 percent of total state public universities); Tamil Nadu has the highest number of deemed universities in the country with 28 deemed universities. Maharashtra (21 deemed universities) and Karnataka (15 deemed universities) follow it.

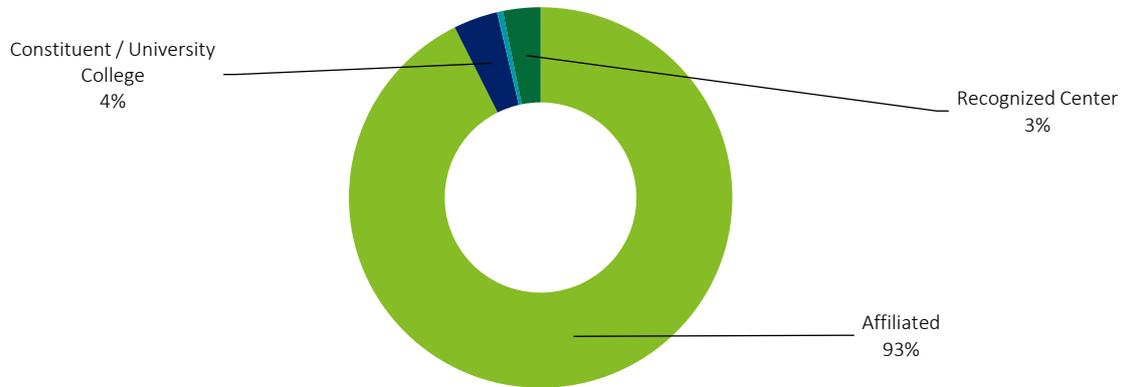

Universities by specialisation: The graph below reflects the break-up of number of universities in India on the basis of specialisation. The country is reported to have 500 general universities (56.69 percent of total), 126 technical universities (14.29 percent), 58 medical universities (6.58 percent), 52 agricultural universities (5.9 percent), 37 other universities (4.2 percent) and 22 law universities (2.49 percent) with all other universities comprising about 9.9 percent.

University by specialisation

Rajasthan has the highest number of general universities in the country with 48 universities in the state. It is followed by Uttar Pradesh (44 general universities) and Gujarat (38). Uttar Pradesh and Tamil Nadu have the highest number of technical universities in the country with a total of 10 and 9 technical universities respectively, present in each state. Delhi, Karnataka, and Maharashtra follow it with 7 universities in each state. Rajasthan has the highest number of medical universities in the country with 8 medical universities present in the state. Maharashtra and Karnataka follow it with 6 universities in each state.

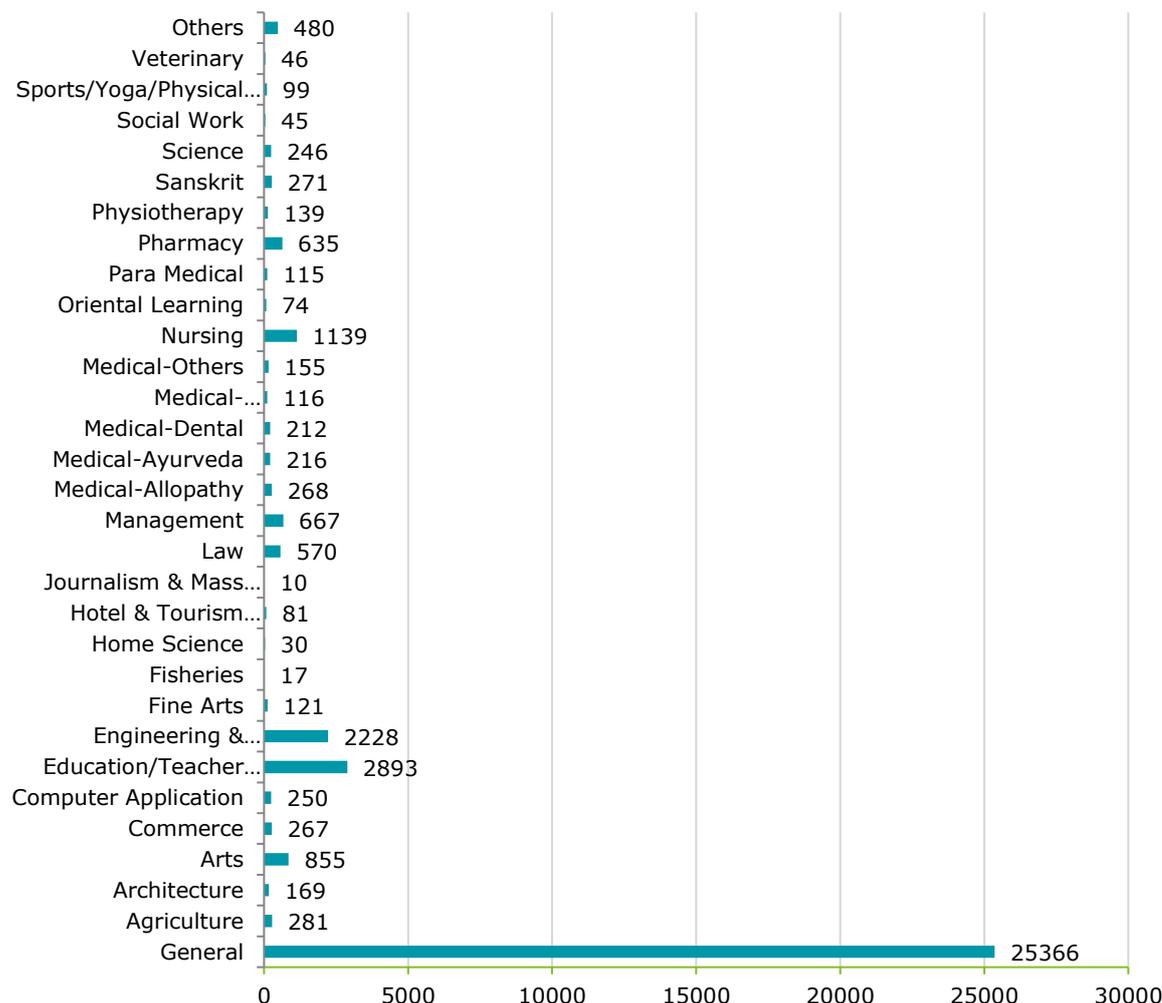

College by type

There are 41,008 colleges in India, of which about 92.61 percent are affiliated, 3.74 percent are Constituent/ University College, another 3.16 percent are recognised centres and 202 colleges are PG centre/off campus centre.

Colleges by specialisation: The bar graph below reflects the break-up of number of colleges in India on the basis of specialization. The division by specialisation is available only for 93 percent of all colleges in India, out of which 66.65 percent are general colleges, followed by education/teacher education (7.60 percent), engineering & technology (5.85 percent), nursing (2.99 percent), and arts (2.25 percent).

Colleges by specialisation

College and institution indicators

Indicator	Universities	Colleges	Stand-alone
Total number of institutions	903	38,061	10,011
Average enrolment per institution	8,046	680	279
Total estimated enrolment (lakhs)	72.65	265.52	21.95

Universities: India has 903 universities, with Rajasthan ranking (79, 8.75 percent) first on total universities in a state, followed by Uttar Pradesh (76, 8.42 percent) and Gujarat (65, 7.20 percent). The average enrolment in each university is about 8,046 students per university and the total estimated enrolment is 72.65 lakh.

Colleges and institutions: India has 38,061 colleges with Uttar Pradesh ranking first (6,629, 17.42 percent of total colleges), followed by Maharashtra (4,294, 11.28 percent), Karnataka (3,535, 9.29 percent), Rajasthan (2,758, 7.25 percent), and Andhra Pradesh (2,572, 6.76 percent).

The total enrolment in colleges in the country is about 265.52 lakh, with an average of about 680 per college. Uttar Pradesh has the higher enrolment in colleges in the country with 54.07 lakh students reported to be enrolled in colleges in the state. This is followed by Maharashtra (29.09 lakh), Tamil Nadu (22.69 lakh), and West Bengal (15.69 lakh).

Stand-alone institutions: Stand-alone institutions are those that are outside the purview of the university and college but require recognition from one or other statutory bodies. These include polytechnics, PGDM, nursing, teacher training, CA, CS, etc. In India, there are 10,011 such stand-alone institutions and the total enrolment in these is estimated to be around 21.95 lakhs. Maharashtra has the highest number of such institutions in the country (1,950).

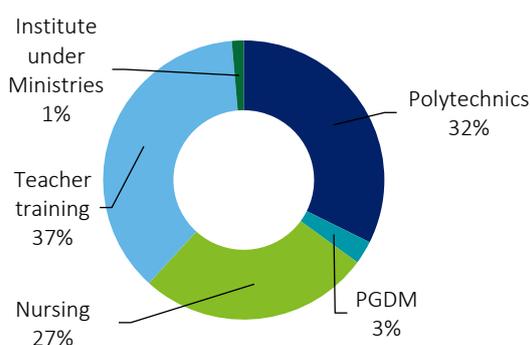

College indicators

College type	Number of colleges	Share by type
Affiliated	37,977	92.61%
Constituent / University College	1,532	3.74%
PG centre/off campus centre	202	0.49%
Recognised centre	1,297	3.16%

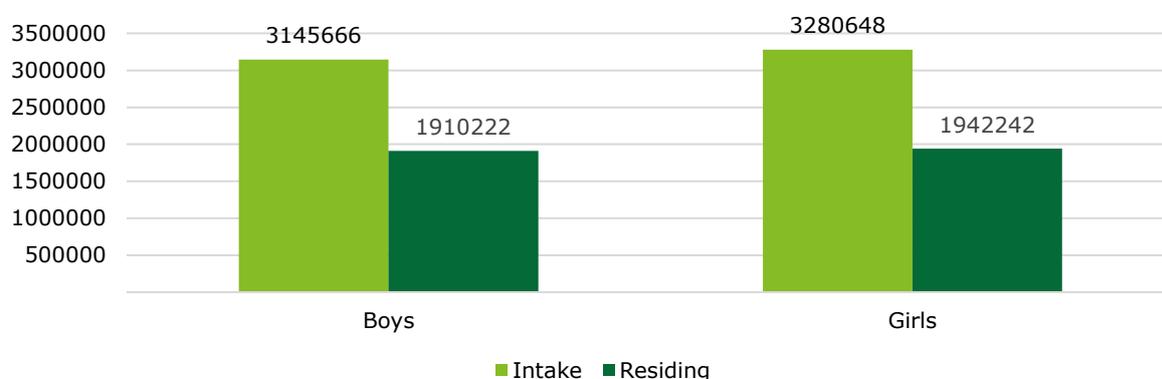

Management of colleges

Type of management	Share of colleges	Share of enrolments	Average enrolment /college
Private unaided	64.7%	46.7%	503
Private aided	13.4%	20.6%	1,077
Government	22.0%	32.7%	1,039

Break up of stand-alone institution

Hostel

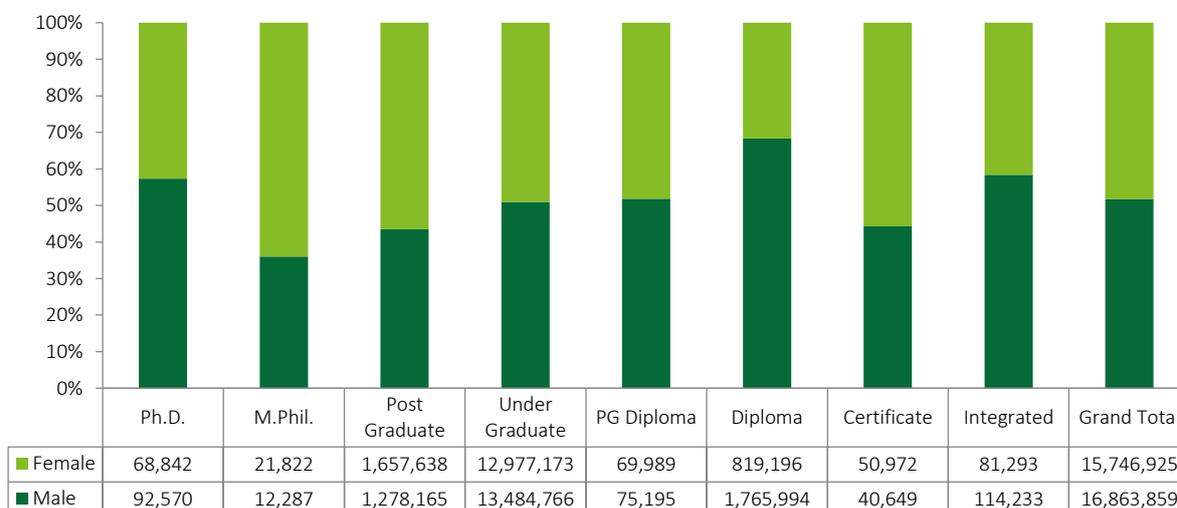

Student enrolment

Total enrolment of students in HEIs in India is around 326.1 lakh, with 52 percent male and 48 percent female enrolments. Uttar Pradesh ranked first in terms of enrolment (19.22 percent of total enrolment); followed by Maharashtra (10.46 percent), Tamil Nadu (9.12 percent), Karnataka (5.77 percent), and West Bengal (5.59 percent). The five southern states of Andhra Pradesh, Telangana, Kerala, Tamil Nadu, and Karnataka account for over one-fourth (26.52 percent) of the total enrolments across India.

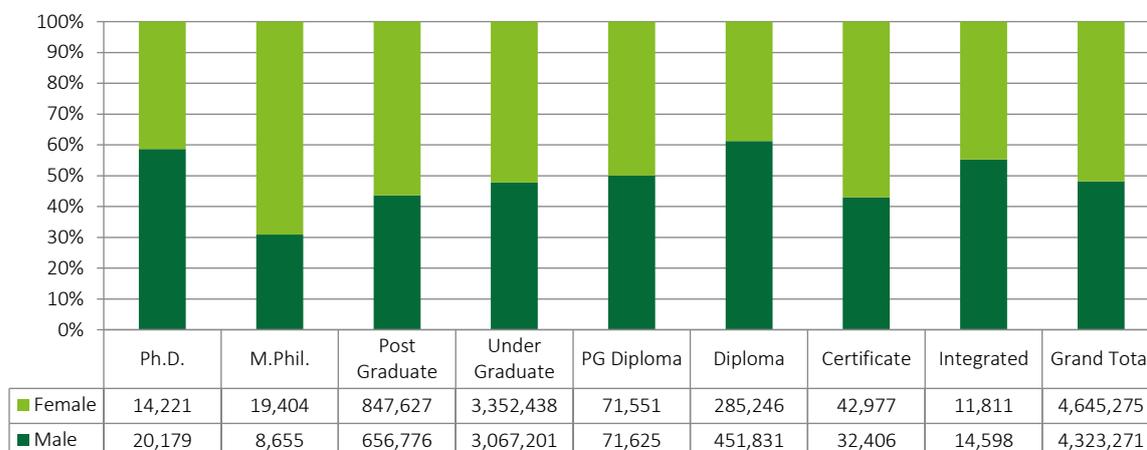

Total enrolment through regular mode in all courses in HE in the country is around 326.1 lakh enrolments in 2017-18. As can be inferred from the figure below, the highest share of enrolment (81.14 percent) is at under-graduate level, followed by post graduate (9 percent), and diploma (7.93%), with all other levels forming <2 percent. Female enrolment under various education levels has been highest in M.Phil. (63.98 percent), post graduate courses (56.46 percent) and certificate (55.63 percent), as compared to their male counterparts.

There is significant gender disparity in enrolment in Ph.D. and diploma courses with females accounting for 42.65 percent of the total enrolments in Ph.D. and only 31.69 percent of total enrolments in diploma levels.

GER

The GER for males (25.4) is higher than GER for females (25.8), resulting in the GPI of 1.01 in 2017-18. In terms of overall GER, Chandigarh ranks first (48.6) among all states and UTs with highest male (67.7) and female (56.4) GER. Among major states, Tamil Nadu (49.1) ranks the highest.

Faculty and staff

Key indicators

Key indicators	India
PTR	30
Teachers per college	33.8
Non-teaching staff per college	32

Calculation is based on the total number of responses as given in the AISHE 2017-18 survey, by MoHRD

The PTR of colleges in India is 30. Among major states, Andhra Pradesh and Telangana have the PTR of 19, followed by Tamil Nadu and Karnataka at 18. Among all states and UTs in India, Puducherry recorded the lowest PTR of 12, followed by Daman & Diu at 14.

The average number of teachers per college is 33.8 and non-teaching staff per college is 32 in India. Among major states and UTs, Chandigarh has the highest number of teaching (136) and non-teaching staff (300) per college, followed by Delhi with 102 teaching staff per college and 197 non-teaching staff per college.

By social group: In terms of representation of various social groups and gender in the teaching and non-teaching staff, the table below provides the relative comparison with the population. It reveals that females are significantly under-represented among the faculty and staff in HEIs as compared to males. In case of social groups also, all the groups shown in the table below indicate a deficit in terms of representation in students, faculty, and staff in higher educational institutions as compared to their share of population in the state. In Bihar, the male staff share is the highest with 84.5 percent and only 15.5 percent females, while West Bengal has a higher share of male staff with 78.9 percent and 21.1 percent females. Uttar Pradesh comes third in this ratio share with 78.2 percent male and 21.8 percent female staff. The average number of females per 100 male non-teaching staff is 47.

The share of student enrolment across all backward groups in India is lesser than their proportionate share in population. OBCs had the highest share of enrolments (35.0 percent), followed by SCs (14.4 percent), STs (5.2 percent), Muslims (5.0 percent), and other minorities (2.2 percent) following the trend of respective population shares of each group in the total population.

Gender and social representation of students, faculty, and staff

Indicator	Male	Female	SC	ST	OBC	Muslim	Other Minority
Share of population	50.2%	49.8%	19.8%	7.1%	48.4%	7.7%	1.6%
Share of enrolment	52.4%	47.6%	14.4%	5.2%	35.0%	5.0%	2.2%
Share of teaching staff	58.0%	42.0%	8.6%	2.3%	32.3%	5.3%	9.4%
Share of non-teaching staff	68.1%	31.9%	14.0%	4.2%	27.1%	3.4%	3.2%

About CII

Confederation of Indian Industry

The Confederation of Indian Industry (CII) works to create and sustain an environment conducive to the development of India, partnering industry, Government, and civil society, through advisory and consultative processes.

CII is a non-government, not-for-profit, industry-led and industry-managed organization, playing a proactive role in India's development process. Founded in 1895, India's premier business association has more than 9100 members, from the private as well as public sectors, including SMEs and MNCs, and an indirect membership of over 300,000 enterprises from 291 national and regional sectoral industry bodies.

CII charts change by working closely with Government on policy issues, interfacing with thought leaders, and enhancing efficiency, competitiveness and business opportunities for industry through a range of specialized services and strategic global linkages. It also provides a platform for consensus-building and networking on key issues.

Extending its agenda beyond business, CII assists industry to identify and execute corporate citizenship programmes. Partnerships with civil society organizations carry forward corporate initiatives for integrated and inclusive development across diverse domains including affirmative action, healthcare, education, livelihood, diversity management, skill development, empowerment of women, and water, to name a few.

India is now set to become a US\$ 5 trillion economy in the next five years and Indian industry will remain the principal growth engine for achieving this target. With the theme for 2019-20 as 'Competitiveness of India Inc - India@75: Forging Ahead', CII will focus on five priority areas which would enable the country to stay on a solid growth track. These are - employment generation, rural-urban connect, energy security, environmental sustainability and governance.

With 68 offices, including 9 Centres of Excellence, in India, and 11 overseas offices in Australia, China, Egypt, France, Germany, Indonesia, Singapore, South Africa, UAE, UK, and USA, as well as institutional partnerships with 394 counterpart organizations in 133 countries, CII serves as a reference point for Indian industry and the international business community.
